**ESOTERIC INTRODUCES “STRESS FREE” 6N COPPER
INTERCONNECT CABLES**

Montebello, CA – January 8, 2007 –Esoteric, a division of TEAC America, has introduced a new series of high-end audio video interconnect cables. The Esoteric DA5500 “nextgen” series cables incorporate 6N (99.99997%) purity copper wire strands and WBT nextgen pure copper RCA connectors. According to an Esoteric spokesperson, “Conductor purity is one of the most important factors in designing audio interconnects to achieve excellent transparency, higher resolution, and more precise imaging. This combination greatly improves performance for wide band frequency response and rapid signal transfer, as required in high quality digital or analog audio video applications.”

Esoteric DA5500 cables incorporate 6N purity copper cores (0.26 mm x 19 strands), produced by a unique “stress-free” annealing method. The conductive cable core is insulated by PTFE Teflon tape, providing ideal sonic performance backed by a low level dielectric constant. The polyethylene insulation used helps to control mechanical resonance, keeping the core and the screen layer at a constant distance to provide stable signal transmission. Double-layer screening, consisting of copper foil and braided UEW, provides protection against noise and other interference. High-quality UV-resistant polyurethane outer jackets offer further resonance damping and ideal flexibility.

The “nextgen” connector was designed and produced by the German manufacturer WBT. WBT is highly rated for their superb product quality. “nextgen” connectors are known for their excellent conductivity, ultra rapid signal transfer, reduced signal path interference, true wide band (1 GHz) performance, and elimination of Eddy currents through true 75 ohms surge impedance as required for high end digital connections. The 6N cables are available now in 1 meter length at a MSRP of \$1400.00 per pair, and in 1.5 meter length at a MSRP of \$1800.00 per pair. The products are sold through Esoteric’s network of specialty audio and video retailers.

About Teac Esoteric Company

Esoteric has been delivering the finest audio components to the most discerning listeners for nearly 20 years. All the components used in building the VRDS - NEO mechanism, VOSP mechanism, digital to analog converters, master clock sync generators, SACD/CD players, universal DVD players, and other electronics, are hand-selected, matched, and graded, to combine into a single synergistic component. In the USA, TEAC Esoteric products are distributed by TEAC America, Inc. TEAC Corporation of Japan was established in 1953.

About TEAC America, Inc.

TEAC America, Inc., the largest subsidiary of the Japanese electronics maker TEAC, distributes high grade audio video electronics, consumer electronics, computer data recording and storage devices, computer peripherals such as CD-ROM, floppy disk, and DVD-ROM drives, and professional recording equipment. Products are marketed by TEAC America under the brand names ESOTERIC, TEAC and TASCAM. TEAC America, Inc. was established in 1967.
